PwC

& SAP BTP

Make your enterprise future-proof with PwC's award winning SAP BTP practice

Why become a future-proof enterprise ?

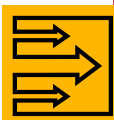

Evolution of technology is opening up new avenues for innovation and transforming the ways businesses across the world engage with their customers, manage systems, handle data and connect with internal and external systems and businesses. SAP BTP is critical to future proof your SAP environment to quickly absorb innovations

Adapt

In today's fast paced world where new technologies and paradigms like **Generative AI, Agentic automations, data fabric, modern scalable integration, intelligent applications** are changing the foundations of how businesses operate, it is an obsolescence risk to cling to old methods.

SAP BTP brings the extension and innovation layer on top of your Core systems to help you be future-proof.

Operate at Speed

With changing business requirements, customer expectations and market dynamics, **success demands your enterprise to operate at pace and swiftly absorb enhancements and innovations**. It is crucial to keep up with the technology progress and SAP BTP enabled your core systems to quickly evolve and absorb SAP and ecosystem innovations.

Keep a Thin Core

A clean and thin core is crucial to ensure your business requirements don't limit you from being and becoming a future-proof enterprise. Enhancements and customisations are sometimes essential and even competitively advantageous, but it is important to ensure they are done in a way that they become your enablers instead technical debt.
