Enterprise Digital

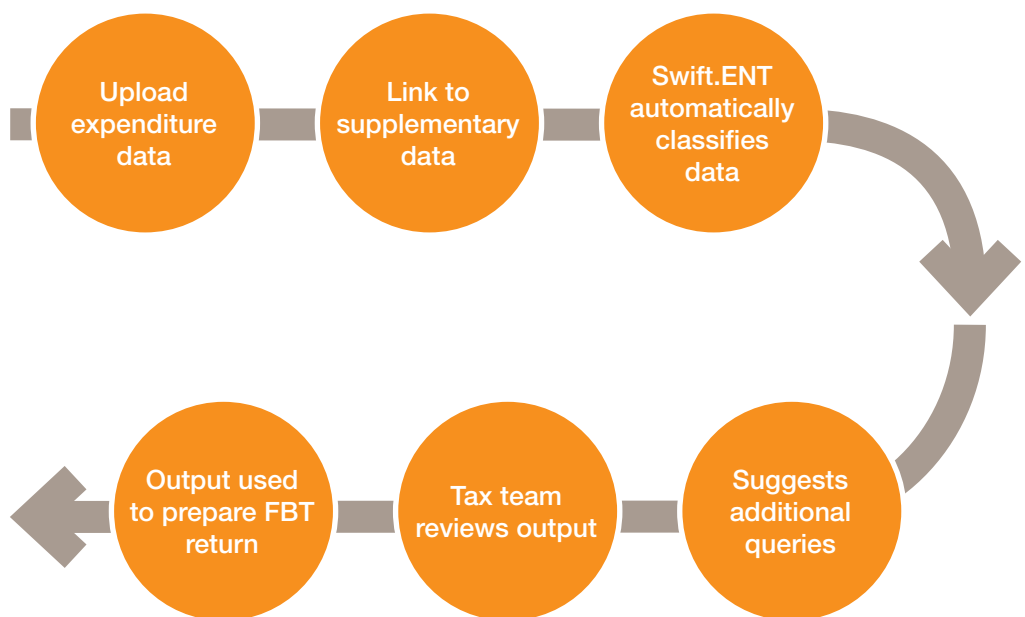

Swift.ENT

Swift.ENT

Developed by PwC's Enterprise Digital team, Swift.ENT uses machine learning algorithms to analyse entertainment expenses. Swift.ENT analyses and queries significant volumes of expenditure and then displays that data in a graphic format that is easy to read and interpret. It can automatically separate expenditure on sustenance from expenditure on entertainment. This is of particular value to clients when deciding if it's preferable to apply the actual or 50/50 method.

How it works

A simpler process to save you time

Swift.ENT integrates into your existing process and reduces the amount of human hours spent reviewing expenses.

- **Analyse all accounts**

Swift.ENT makes it easier to strip out entertainment expenditure from non-entertainment accounts.

- **Queries**

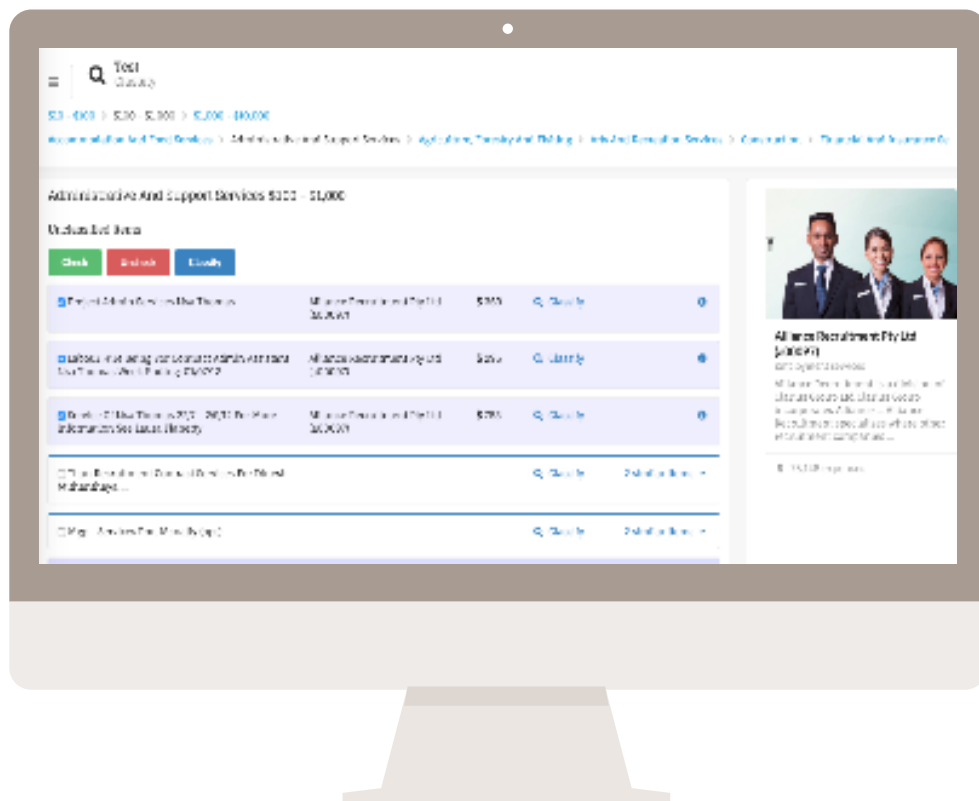

Swift.ENT can automatically trigger queries, Where further information is required.

- **Supplementary data**

Swift.ENT can link in with supplementary data sources. (e.g. AMEX claims)

- **Machine Learning**

Because Swift.ENT uses machine learning to analyse accounts, its performance improves over time.

User friendly interface

The Swift.ENT dashboard is user friendly and secure it can be customised to meet your specific needs and requirements. The underlying technology learns the entertainment profile of your company by studying recurring information and feedback. Over time, this reduces your compliance burden, reduces your working hours and saves you money. Swift. ENT delivers the information you need for preparing the FBT return while ensuring you comply with ATO guidance.

SWIFT.ENT

Automate FBT claims for entertainment expenditure
